Education

University of Bristol, United Kingdom
PhD in Economics. Thesis on household finance, taxation, and intergenerational inequality. Supervisors: Hakki Yazici and Pawel Doligalski. 2023–June 2027 (expected)

University of Bristol, United Kingdom
MRes in Economics. 2023

London School of Economics and Political Science, United Kingdom
MSc Economics. Research Assistant to Professor Guy Michaels: data collection and documentation in urban economics. 2022

Seoul National University, Korea
BA in Economics (Department of Agricultural Economics and Rural Development). Ranked 2nd in cohort. 2012

Research

Research interests: Macroeconomics; household finance and housing; public finance; inequality; quantitative life-cycle models.

Job Market Paper

Priced Out: Housing Costs, Generational Wealth Gaps, and Youth Welfare
Quantitative structural lifecycle model of the United States, 1960 to the present. The model is solved forward under alternative scenarios to separate the contributions of housing prices, interest rates, and earnings to the decline in homeownership among younger cohorts. The analysis examines how the housing channel shapes wealth accumulation and intergenerational differences in welfare, with the burden falling disproportionately on households with low earnings and little initial wealth.

Research in Progress

Taxed Out or Priced Out? Replacing the Residential Property Tax in the United States
Overlapping-generations general equilibrium model in which households can hold rental property alongside safe assets and equity, used to study the property tax reforms US states have put to voters, such as abolition and homestead exemptions. Ranks designs under alternative social welfare criteria and measures gains and losses along the transition path by age, tenure, and income.

Earlier Research

The Minimum Wage Spillover Effects: Asymmetry and Heterogeneity Models MSc essay, LSE
Policy evaluation using a panel of roughly 120,000 wage observations from the Korean Labor and Income Panel Study, 1998–2020, with individual and time fixed effects. The analysis finds no spillover in the pooled sample, but positive effects after 2009, concentrated in settings where the minimum wage binds least.

Teaching

Teaching interests: Intermediate Macroeconomics; Money and Banking; Public Economics; Econometrics; Applied Data Analysis with Python.

University of Bristol, School of Economics
Intermediate Macroeconomics, Teaching Assistant; regular tutorials; assistance in computer lab sessions, advising students on Python-based projects; formative and summative assessment, including essay and final examination marking. Reappointed for four consecutive years at the request of the course lecturers. 2023/24–2026/27

Economics, Teaching Assistant and essay marking. 2025/26
Mathematics, Marking. 2025/26

Practitioner Training
Bank of Korea, designed and organised training programs for central bankers from across Asia, including Pakistan, India, Malaysia, Indonesia, Thailand and Vietnam, invited specialists from the relevant departments to teach, and hosted the opening and closing sessions. 2019–2020
Bank of Korea, supervised interns and, as a manager, junior staff. 2012, 2015–2021

Professional Experience

Bank of Korea
Manager, International Affairs Department 2019–2021
- Coordinated the Bank's cooperation with the Bank for International Settlements and other international organisations; prepared senior management meetings and coordinated positions across departments.

Economist, Economic Statistics Department 2017–2019
- Compiled national accounts using national surveys, administrative, customs, industry, and high-frequency transaction data.
- Developed measures of the digital sharing economy and crypto-asset market.

Junior Economist, Research Department 2012–2017
- Produced regular GDP forecasts and nowcasts for the Monetary Policy Committee and rebuilt the OECD composite leading indicator for Korea.
- Conducted research on growth, productivity, investment, R&D, FDI, housing, and emerging economies, including policy reports on current issues for internal use.
- At a regional branch, ran the business sentiment survey through visits to firms and the consumer sentiment survey by post, with telephone follow-up.
